Final Project Sprint 1

Advanced Embedded Software Development

with **Dan Walkes**

University of Colorado **Boulder**

Learning objectives:

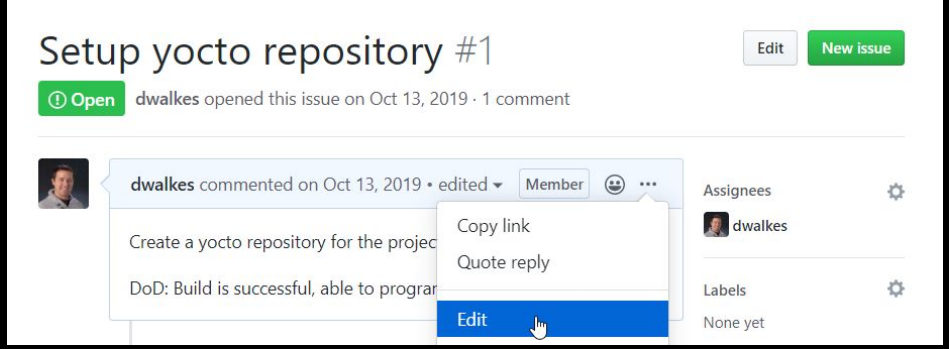

Final Project Sprint 1 assignment overview.

Final Project Sprint 1 Assignment

Sprint Scope

- Consider defining your issue as something other than a completed, final implementation of a software component in 1 sprint.
- Think about how you could split up the work into more manageable chunks
  - First implementation has limited features, only does basic checks.
  - First implementation only runs on your Linux PC or VM.

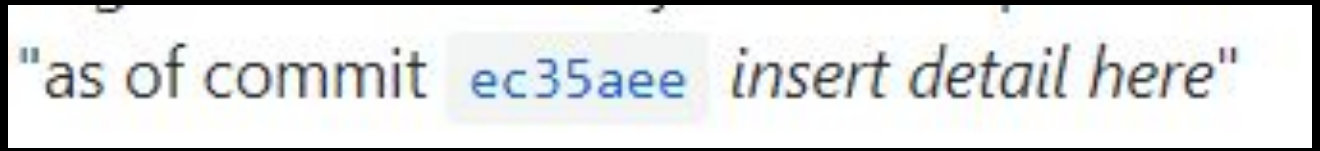

Sprint 1 Updates

- Please use the “Edit” option to update/edit the description at the top of the issue.
  - Keep it up to date so it’s always a valid summary of what is planned/complete.
- Please include the DoD in the description, revised as necessary to match what you actually completed.
- If you didn’t actually get anything complete on an issue update the issue with a comment but don’t close it.
  - Use the comments for transient information, latest status updates, responses to questions, etc.

Sprint 1 Updates

- Think about how to report partial status
  - Comment in the issue “ As of commit <commit hash> _insert detail here_”

Issue DoD Guidance

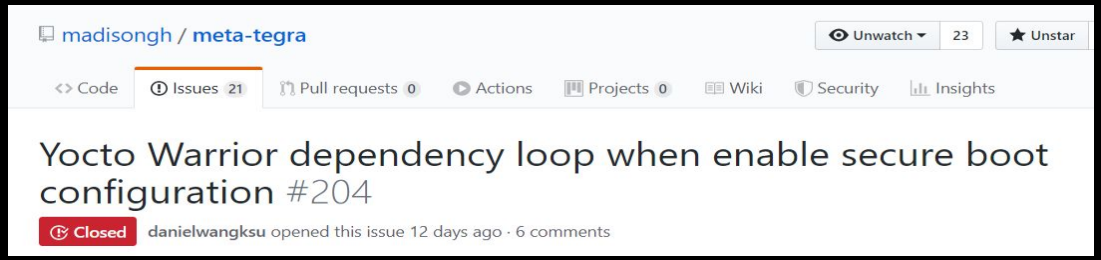

- When marking a task complete, update DoD to match what you accomplished and what you did to verify.
- When looking at the final detail, ask yourself “If I was a student assistant/peer reviewer looking at code plus this issue DoD would I have enough information to verify the issue?”.
  - If Yes, DoD is sufficient
  - If No, DoD probably needs more detail.

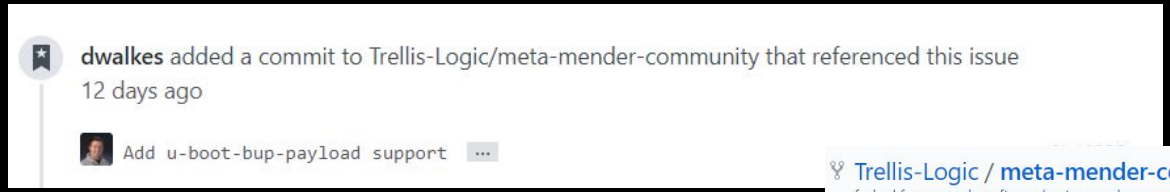

Github Issue Repositories

- Consider putting github issues in repositories where relevant code will be checked in.
- This allows you to use easily use issue references in your commit to automatically link commits to your issue.
- See links below for detail
  - Note - reference without “Closes” or “fix” to keep the issue open

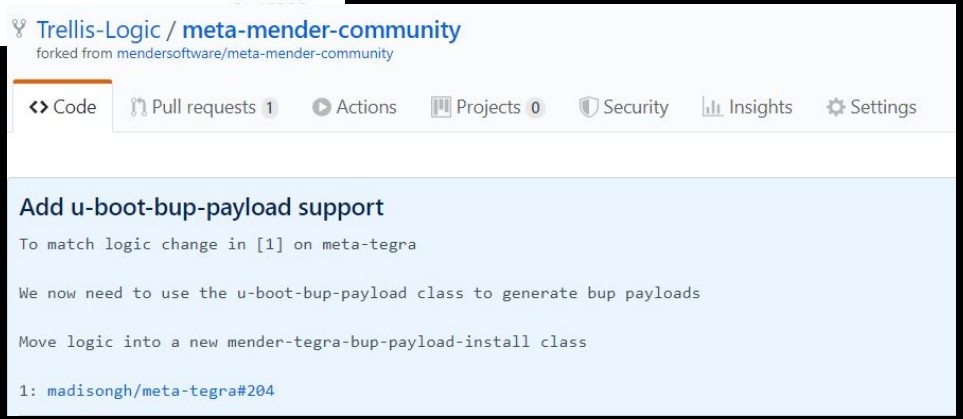

https://help.github.com/en/github/writing-on-github/autolinked-references-and-urls
https://stackoverflow.com/questions/1687262/link-to-the-issue-number-on-github-within-a-commit-message
https://help.github.com/en/github/managing-your-work-on-github/closing-issues-using-keywords

Github Issue References Example

- If this was an issue in my repository I could have just mentioned “Issue #204” in my commit description to setup this link.

https://github.com/madisongh/meta-tegra/issues/204
https://github.com/Trellis-Logic/meta-mender-community/commit/0bd63228971eba1f91c61f72b99fdbff79e32c82

Sprint Deliverables

- You should have *something* building as a part of the sprint 1 deliverable.
  - More than just empty script files/c files
- You should plan to implement *some* working code/buildroot configuration changes as a part of each sprint for each person in the group.
